ABSTRACT

Millettia, one of the main genus of *Fabaceae*, known to produce flavonoid compounds. Some isoflavones compounds such as jamaicin, were found from the leaves of *M. ichthyochtona* afforded. Compound Jamaicin was found for the from *M. ferruginea*. Struktur determination of these compounds was carried out based on physical and spectroscopic method (UV,IR, $^1\text{H-NMR}$, dan $^{13}\text{C-NMR}$).
